Profile Summary

MERN Stack Developer with 5+ years of experience building scalable web applications using React.js, Node.js, Express.js, and MongoDB. Skilled in backend architecture, RESTful APIs, cloud technologies, and secure application development. Experienced in delivering high-performance solutions, optimizing system efficiency, and developing enterprise-level applications.

Experience

Tharb - Doha, Qatar 2022 – Present

Senior Full Stack Developer

- Spearheaded the development of web and client/server applications using React.js and Node.js, increasing application scalability and overall performance by 30%.
- Optimized customer-facing solutions with JavaScript and Entity Framework integrations, accelerating data retrieval operations and reducing response times.
- Leveraged Object-Oriented Programming principles including inheritance, abstraction, and polymorphism, improving code maintainability and shortening development cycles by 30%.
- Strengthened application security through MongoDB Atlas, JWT authentication, and role-based authorization mechanisms, reducing unauthorized access attempts by 40%.
- Implemented DevOps practices by managing Docker containerization, configuring CI/CD pipelines with GitLab, deploying applications on AWS infrastructure, and monitoring production environments to ensure high availability, faster release cycles, and reliable application performance

TechGeekFirms - Mumbai, India 2021 – 2022

Full Stack Developer

- Advanced exception handling, debugging, and tracing methodologies, improving application runtime stability and accelerating issue resolution by 25%.
- Resolved complex application defects through systematic root-cause analysis, strengthening software quality and minimizing recurring production issues.
- Collaborated with cross-functional teams to deliver scalable MERN stack solutions, contributing to a 15% increase in overall team productivity.

Skills

- **Programming Languages:** JavaScript, TypeScript, Python, C, C++
- **Frontend Technologies:** React.js, Next.js, Redux, Redux Toolkit, Zustand, HTML5, CSS3
- **Backend Technologies:** Node.js, Express.js, REST APIs
- **Database Technologies:** MongoDB, MySQL, PostgreSQL
- **Messaging & Caching:** Apache Kafka, Redis
- **Cloud / DevOps:** AWS, Docker, CI/CD, GitLab
- **Version Control / Tools:** Git, GitHub
- **Architecture & Concepts:** Microservices ,Event-Driven Architecture, Scalable Systems, Backend Architecture, Cloud Computing, Web Development

Projects

SmartHireX Recruitment Automation Platform 2026

- Automated multi-platform job posting workflows, increasing candidate reach by 40% and improving recruitment visibility across multiple hiring channels.
- Built a centralized CV management system and candidate tracking pipeline, reducing HR processing time by 30–35% and streamlining recruitment operations.
- Developed role-based authentication and recruiter dashboards, enabling secure access management and improving recruiter productivity by 25%.
- Integrated AI-powered resume parsing and filtering mechanisms, accelerating candidate shortlisting processes and reducing manual screening efforts.
- Engineered RESTful APIs using Node.js, Express.js, and MongoDB to enable secure candidate management, job postings, and workflow automation.
- Optimized backend architecture and database queries, improving platform response speed by 35% and supporting seamless hiring operations.

Store Management System (Qatar) (CRM) 2025

- Spearheaded the design of a CRM and POS platform deployed across multiple retail stores, centralizing inventory, billing, procurement, and operational management functions.
- Established role-based dashboards for administrators, cashiers, and store managers, enabling streamlined access to 10+ operational and reporting modules.
- Automated inventory monitoring and stock tracking workflows, reducing stock reconciliation efforts by 60% and enhancing product visibility.
- Implemented sales analytics and reporting features, improving business decision-making through real-time revenue and inventory insights.
- Built secure billing and transaction management modules, minimizing manual processing errors and improving operational efficiency across retail environments.
- Enhanced backend API performance through query optimization techniques, decreasing system response time by 35% during peak transactions.

Enterprise E-Commerce Platform (MERN) 2024

- Architected a multi-vendor e-commerce platform supporting 5+ core business modules, including product catalogs, shopping carts, order lifecycle management, payment processing, and administrative operations.
- Engineered scalable backend services using Node.js and MongoDB, streamlining transaction workflows and improving request processing efficiency by 40%.
- Implemented secure payment gateway integrations and order tracking functionalities, enhancing transaction reliability and customer satisfaction.
- Developed responsive user interfaces using React.js, improving cross-device accessibility and reducing page interaction latency by 30%.
- Configured role-based access controls for customers, vendors, and administrators, strengthening platform security and operational management.
- Optimized application deployment workflows and backend performance, improving scalability and reducing downtime during high-traffic periods.

Education

Bachelor of Science in Computer Science 2021
BAMU University, India
